2020-2026 FORD INTERCEPTOR UTILITY

VSX CONSOLE

30% LIGHTER. 100% MISSION READY

The VSX Console is built for fleets that count on every vehicle, every shift. Engineered for the Interceptor Utility, it organizes control heads, computers, and accessories into one platform, with a modular front bin or printer setup. Configure it once, then standardize across the fleet.

- **Lighter by design.** A steel and polycarbonate build cuts console weight to help protect range, without giving up strength.
- **Factory-look fit.** Precision-engineered to the Tahoe interior for a clean, OEM-style install.
- **Built for daily duty.** A heavy-duty steel chassis stands up to shift-after-shift use.
- **One platform, every role.** Shared layout and accessories standardize upfits across the fleet.
- **Eyes on the road.** Ergonomic control placement keeps equipment within reach and reduces distraction.
- **Configure to the mission.** Choose a front bin or integrated printer setup, then add laptop or tablet mounting.

ONE PLATFORM. EVERY CONFIGURATION.

Start with the console or choose a complete laptop or tablet package. Every VSX configuration shares the same rugged foundation, so you can match each role today and standardize across the fleet tomorrow.
